Voluntary Attrition Rate by Experience_Years

View Key Insights

"Attrition is not a company-wide crisis but a Junior talent problem driven by compensation."

Workforce Composition

- The workforce is heavily weighted toward Junior and Mid levels (~**76% combined**), meaning retention failures at these levels have an outsized impact on the entire organization
- Sales dominates headcount at **30%**, making it both the largest department and a critical retention priority

Salary is the Strongest Attrition Driver

- Employees earning below **\$50K** leave at nearly **3x** the rate of those earning above **\$120K (17% vs 3%)**
- Junior employees have the lowest median salary at **\$50K**, directly linking the compensation gap to the attrition pattern
- HR has the lowest median salary across departments at **\$65K** and simultaneously the highest attrition rate, this is not a coincidence

Performance is Stable but Uneven

- The majority of employees rate as "Good" across all departments, suggesting a performance culture that **avoids difficult conversations** rather than one that genuinely rewards excellence
- Performance distribution is **almost identical** across work modes, meaning remote, hybrid, and on-site employees perform equivalently, which challenges assumptions about remote work productivity

Attrition is Voluntary and Predictable

- **77%** of attrition is voluntary (resigned) vs **22%** involuntary (terminated), employees are actively choosing to leave, not being pushed out
- Attrition risk peaks in the first **2 years** at **~14%** then drops sharply after **year 5**, the critical retention window is early tenure
- Junior employees in HR and Operations are the highest risk segment, with voluntary attrition rates of **16%** and **15%** respectively
- Employees who survive past **5 years** are highly likely to stay long term, retention efforts should focus on years **0–5**

"The data points to one conclusion: invest in your Junior talent early, or lose them before they become your Senior talent."

Addressing compensation for Junior employees earning **below \$80K** would simultaneously tackle the highest-risk job level, the highest-risk salary band, and the highest-risk tenure window, one intervention, maximum impact.
